Bartech releases newly designed remote controls!

Always willing to combine state-of-the-art technology with the latest designs from the market, Bartech just launched new versions of its multi-functional remote controls. The five existing models, which have been completely redesigned, are now available to manage the main functionalities of Bartech' impressive Minibar Management System.

Bartech is the only supplier of automatic minibars who provides dedicated remote controls to manage some major functions of its system: Minibar locking /unlocking in the rooms, full refilling process and minibar testing for maintenance are easily handled by the hotel staff on a room-by-room basis thanks to Bartech's easy-to-use remote controls.

As previously, these items are provided as standard within Bartech's turnkey installation package.

About Bartech...

Bartech has been providing turnkey solutions of automatic mini-bars to the hospitality industry for now 20 years. With around 250 000 rooms installed in more than 45 countries, the Bartech system is regarded as a standard by major hospitality chains worldwide and was also selected by many independent hotels. With a wide range of automatic minibars with capacities from 40 to 75 litres, different types of dry section and two different cooling units, Bartech can fit to any in-room decor. Bartech's software Winbart™ posts all minibar charges automatically to the guest folio through an interface with the hotel's property management system. Thanks to the automatic control, Bartech allows hoteliers to drastically reduce their costs while maintaining an outstanding quality of service thus turning their minibar operation into a real profit centre.
